EduCheck - UAT Plan (Atimonan session)

Step-by-step plan for formal testing and UAT (SPMP Sprint 9), from preparation to the write-up. Written 2026-10-11. Tick items off as they are done.

Status key: ✅ done · ☐ to do · ⏳ waiting on someone

The plan in short

- **Where:** a public elementary school in Atimonan, reached through a teacher contact (the developer's mother, a former elementary teacher). One team member travels from Lucena; the others join by video call.
- **What is tested:** one section, **Rizal (Grade 6), Departmentalized**. The Class Adviser teaches most subjects and 2 Subject Teachers teach the rest, which matches the school's real setup. Section Mabini stays in the database only for 4 "must be refused" checks (TC-018, TC-019, TC-026, TC-032).
- **How long:** one half-day session (about 3.5 hours). Testers work in parallel, one role each. Defects are fixed at home and retested by video call.
- **Data:** sample data only. No real learner records are used, so the school does not need to share any data.

Testers needed

Role	People	Test cases (approx.)
School Administrator (or ICT coordinator)	1	~19
Class Adviser	1	~15
Subject Teacher	2	~10 each
Principal	1	3

Each tester gets their own account. Do not let two people share one account. The developer's mother can be one tester, but most results should come from other teachers, and the relationship must be disclosed in the documentation.

Phase 1 - Information to get (from the contact in Atimonan)

- ⏳ Which school, its **School ID**, district, division and region (for the SF10 header and login page)
- ⏳ **Date** of the session, agreed with the principal. Prefer a Saturday or a no-class day.
- ⏳ **Who** will test, and how many per role (table above)
- ⏳ **Which of the 8 Grade 6 subjects** the Adviser teaches, and which the 2 Subject Teachers teach
- ⏳ Whether testers agree to their real names on their EduCheck profiles (otherwise use "Teacher A", etc.)
- ☐ Tell the **capstone adviser** about the test site, and ask for a signed request letter to the principal

Phase 2 - Preparation at home (before the trip)

System and data

- ✅ Backup taken before any change: `EduCheck-db-backups\educheck_db_2026-10-11_2044.sql`
- ✅ UAT input files ready: `03-Testing/UAT-files/` (one per upload test case)
- ✅ Leftover dev route removed; setup README written; `npm run create-admin` added
- ☐ **Database reset to the UAT baseline** (script reviewed; waiting for the go signal): Rizal only for the Adviser; failing Science uploads removed; nothing Approved; LRN 004-015 Pending; LRN 099-100 incomplete; 5 learners in Mabini; notifications cleared
- ☐ **Departmentalized setup** (needs the subject split from Phase 1): Rizal set to Departmentalized; Adviser assigned to their own subjects; a second Subject Teacher account created and assigned; "Adviser Test" renamed
- ☐ **Automated test** for an Adviser with own subjects in a Departmentalized section
- ☐ **UAT workbook updates:** TC-020 and TC-030 reworded for the Departmentalized setup; tester passwords written in the Instructions sheet
- ☐ Enter the school details in School Settings (from Phase 1)
- ☐ Take the **UAT baseline backup** after the reset and setup. Every test round starts from it.
- ☐ Build a fresh APK from the current code (from a copy outside OneDrive) and install it on the test phone

Cases the team runs before the trip (technical, not for teachers)

Case	Why the team does it
TC-005 login lockout	The lockout is per device. On site it would lock everyone using the server laptop out for 15 minutes.
TC-063 browsers (Chrome, Edge, Firefox)	Needs several browsers installed; not a teacher task
TC-064 laptop and tablet widths	Same
TC-067 session expiry	Needs 8 hours idle; clear the token instead
TC-020 staffing mode switch	Changing Rizal's mode during the session would disrupt the other testers. Switch it, check, switch back.

Record these in the workbook like any other case, with the team member as Tester.

Documents to prepare and print

- ☐ Request letter to the principal, signed by the capstone adviser
- ☐ Consent form for each tester (participation, photos, use of their ratings and comments)
- ☐ ISO/IEC 25010 questionnaire (usability, functional suitability, performance, compatibility, security)
- ☐ One-page session plan per role: that role's cases in running order
- ☐ Login slips: one per tester with the server address, username and password
- ☐ `EduCheck_Known_Limitations.md` (one copy to read during orientation)
- ☐ A printed copy of the Test Cases sheet for writing results if a laptop is not free

Rehearsal (do this at least 2 days before)

- ☐ Run the whole setup on the **pocket WiFi or phone hotspot** you will bring, not home WiFi: laptop as server, a second device opens the web app, the phone app logs in. LAN steps are in the README ("Using EduCheck from other computers").
- ☐ Restore the baseline backup once, so you know the command works.
- ☐ Time yourself doing one role's cases, to check the schedule.

Phase 3 - Day before

Pack:

- ☐ Laptop (EduCheck installed and running) and charger
- ☐ Pocket WiFi or phone hotspot, with load or data and a charger
- ☐ Android phone with the EduCheck APK, and its charger
- ☐ Extension cord with several outlets
- ☐ Extra laptop(s) if a teammate or relative can lend one (aim for 3+ screens in total)
- ☐ USB flash drive with the UAT-files folder and the baseline backup
- ☐ All printed documents, pens, clipboard
- ☐ Small snacks or a token of thanks for the testers

Check:

- ☐ Baseline backup restored on the laptop; `npm test` passes
- ☐ `backend/.env` CORS_ORIGIN and `frontend/.env` VITE_API_URL set for the hotspot's address
- ☐ Video call link sent to teammates; who takes notes is agreed

Phase 4 - UAT day

Schedule

Time	Activity
7:30	Arrive. Start hotspot, backend and web app. Connect one tester device to check.
8:00	Welcome, consent forms, 10-minute demo of EduCheck, read Known Limitations
8:30	**Block 1** (see order below)
9:30	Break
9:45	**Block 2**
10:45	**Block 3:** mobile cases, phone passed around
11:15	TC-065 first-time task, then the ISO 25010 questionnaire
11:45	Thank-yous, group photo, screenshots for Chapter 4
Afternoon	Buffer for anything that ran over

Running order (these dependencies are real; follow them)

1. **Block 1 - setup and uploads.**
   - Everyone first, on their own account: TC-001 to TC-003, TC-006, TC-008 to TC-011 (Subject Teachers also TC-007). After TC-008, write the new password on the login slip. TC-004 (inactive login) is done by the Admin with the test user from TC-013.
   - Admin: TC-012 to TC-019, TC-021, TC-029 (creates *extra* test users; the tester accounts already exist)
   - Subject Teachers: TC-022 to TC-027 (upload, refused files, error file)
   - Adviser: upload own subject (reworded TC-030), then TC-031, TC-032, TC-034, TC-038
   - Principal: TC-043, TC-044
   - Team member: time TC-061 and TC-062 on the real network
2. **Block 2 - the approval flow, in this order:**
   1. Adviser returns a subject (TC-033). This flags that subject for **every** learner, so no one can be submitted yet.
   2. That Subject Teacher re-uploads the corrected file (TC-028), which clears the flag.
   3. Adviser submits (TC-035, TC-036, TC-037).
   4. Admin approves and rejects (TC-039, TC-040).
   5. Only now: approved lock and amendment (TC-041, TC-042). After the first approval, **all Rizal uploads are refused** (D-04), so no uploads after this point.
   6. Admin: repository and SF10 (TC-045 to TC-047), analytics (TC-050). Adviser: TC-048, TC-049. Everyone: notifications (TC-051).
3. **Block 3 - mobile:** TC-052 to TC-060, one role at a time on the shared phone.

Rules for the day

- Do **not** fix bugs on site. Write each failure in the Defect Log with the steps and a screenshot or photo.
- If a case is blocked by an earlier failure, mark it **Blocked**, not Fail.
- Do not restore the backup in the middle of the session unless the data is unusable. If you do, note the time.
- Take photos of the session (with consent) for Chapter 4.

Phase 5 - After the session

- ☐ Take a backup of the session's final state (evidence of what testers did)
- ☐ Triage the Defect Log: severity per the guide in the workbook
- ☐ Fix Critical and High defects first, and record the fixing commit in "Fixed In"
- ☐ **Retest by video call** with the tester who found each defect; fill in "Retest Result"
- ☐ Tabulate the ISO 25010 questionnaire (mean per characteristic, with its interpretation)
- ☐ Copy the Summary sheet results into Chapter 4, with screenshots and photos
- ☐ Update `EduCheck_Known_Limitations.md` if a defect is accepted rather than fixed
- ☐ Add the risk "No confirmed UAT site or users" and how it was handled to the SPMP risk table
- ☐ Write the next hand-off in `05-Handoffs/`

Open decisions

- Should one Approved learner lock uploads for the whole section (D-04)? Currently yes. Confirm with the capstone adviser before UAT.
- 3-term school years are shown as "Unsupported" on the SF10 (D-05). Still waiting for the capstone adviser's agreement.
